

Creating Front Panel Alternative for a Manufacturer of Electronic Controls

When a new project emerged for a manufacturer of electronic controls, the company realized they needed to consult other expertise for production.

Needing a polycarbonate window panel that allowed display lighting to show through, the manufacturer contacted Roemer Industries to discuss the spectrum of this project. With Roemer's ability to screen print multiple color polycarbonate products, the project was sent in for review.

The customer was relying on their internal expertise for the design, which was requiring a special effect for the window printing. When the Roemer team reviewed the drawing, they were able to provide an alternate solution that would significantly reduce the cost and obtain the same high quality appearance.

With Roemer Rapid Prototyping, samples were manufactured for their engineering approval. By using Roemer Industries, the company was able to receive prototypes that exceeded their requirements, while gaining a significant reduction in cost.
