

Custom Hazardous Label Tags Ensure Compliance and Safety for Leading Wind Energy Corporation Service Units

Service units for a leading wind energy corporation were running into a dangerous and harmful situation when transporting required chemicals to site locations. Imperative to compliance and health, the containers must be identified properly with the MSDS markings. Because of the external application, the traditional paper based labels were continuously failing at an unacceptable rate.

Understanding the severity of the situation, Roemer Industries was consulted for an industrial strength labeling solution. Considering the application, several materials were recommended that provide chemical resistance and durability in harsh environments.

Roemer was able to create completely custom, hazardous material tags with multiple colors, engineered specifically for the corporation's needs. Roemer Industries will be keeping the customer's service staff compliant and safe with labels that are legible, attached and secure on their hazardous containers.
